

COMPANY

We offer powerful solutions for documentation and design of your network, the analysis of faults and event patterns through efficient measurement technology, and sustainable correction of errors.

Founded in 1995, the Herakom GmbH develops analyzers for ISDN and WAN / LAN-based embedded systems and notebooks. The partners have over 20 years of experience in the fields of ISDN and data communications measurement technique in the field of LAN / WAN analysis and the development support communication applications.

The requirements of each network vary - and thus also the needs of our customers. Because of this, our portfolio consists of several modules together. So we go precisely to the customers' needs and provide customized solutions. This ensures efficiency, reliability, sustainability and efficiency. Even with the (future) changes in the requirements profile, we take flexible adjustments.

We guide you and your staff on all of our manufactured measuring instruments and provide you with our expertise at your disposal - whether measurement occasion of a hacker attack or training and advice about your communication.

We can arrange to your liking workshops to promote the exchange of knowledge within your organization and enable potential for development and support.

Special orders and Development and the new division of the development support for modern microprocessors complete our range of services from us to you.
